

TECHNICAL INFORMATION

Scrapers | Turcon® Excluder® F

Description

The Turcon® Excluder® F is a double-acting scraper with two geometrically different scraper lips, which are positioned back-to-back. The scraper is always installed with 2 O-Rings as elastic energizing elements in one groove. The scraper function itself is performed by the Excluder® F, Turcon® element. The O-Rings maintains the pressure of the scraper lips against the sliding surface and compensates deflections of the piston rod.

Excluder® F has two functions:

- Scrape particles from the retracting piston rod and thus to protect the system from contamination
- Hold back the residual oil film on the

extending piston rod on the medium side.

- Excluder® F is preferably used in conjunction with our rod seals Turcon® Stepseal® 2K or Zurcon® Rimseal, i.e. Seals with a hydrodynamic back-pumping function.

The Excluder® F is used from medium to “light-heavy” duty applications in:

- Light construction machinery
- Truck crane
- Agriculture machines
- Hydraulic presses
- Injection moulding machines
- Hydraulic actuators

Advantages

- Outstanding sliding properties
- Stick-slip-free, no sticking for Turcon® materials
- Can compensate for deflections of the piston rod or plunger
- Very good scraping effect even against firmly adhered dirt, etc.
- Very good sealing effect from the inside against the residual oil film adhering to the surface of the piston rod
- Very high resistance to hydraulic media
- Available for diameters from 19 up to 250 mm
- ISO/DIN 6195 Type D installation on recommended dimensions from ø40 to ø140 mm

Technical Data

Speed	: Up to 15 m/s
Temperature	: -30 °C to +200 °C (depending on O-Ring material)
Media	: Mineral oil-based hydraulic fluids, flame retardant hydraulic fluids, environmentally safe hydraulic fluids (bio-oils), phosphate ester and others, depending on scraper and O-Ring material compatibility.
